NM Technology Council and UNM-LA to offer 21st Century Classroom workshop for teachers

The New Mexico Technology Council has partnered with the University of New Mexico-Los Alamos to provide an exciting new workshop for K-12 classroom teachers to be held July 19-22 at UNM-Los Alamos. At the 21st Century Classroom workshop, teachers will learn to use the latest techniques for engaging their students. The training will focus on the use of interactive whiteboard technologies, Internet resources, and student response devices that have proven successful in 21st century classroom environments.

Principals from the K-12 school districts around northern New Mexico have been invited to send teams of teachers and technical staff to attend this unique training. Attendees will have the opportunity to use the newest classroom technologies and share experiences about the work being done in their own school districts.

Instruction will be provided by trainers from the leading manufacturers of classroom technology. Each day will include hands-on work with the equipment, discussion with experienced teachers and training staff, and an opportunity to develop classroom materials that can be incorporated into local curriculum. Teacher and staff attending the workshop will be prepared to assist their

home district with the selection of new classroom technologies and the development of engaging curriculum for their students.
